the framework of algorithms presented in this book is called cost approximation it describes for a given formulation of a variational inequality or nonlinear programming problem an algorithm by means of approximating mappings and problems a principle for the updating of the iteration points and a merit function which guides and monitors the convergence of the algorithm one purpose of the book is to offer this framework as an intuitively appealing tool for describing an algorithm another purpose is to provide a convergence analysis of the algorithms in the framework audience the book will be of interest to all researchers in the field it includes over 800 references and can also be used for advanced courses in non linear optimization with the possibility of being oriented either to algorithm theory or to the numerical aspects of large scale nonlinear optimization

this monograph provides both a unified account of the development of models and methods for the problem of estimating equilibrium traffic flows in urban areas and a survey of the scope and limitations of present traffic models the development is described and analyzed by the use of the powerful instruments of nonlinear optimization and mathematical programming within the field of operations research the first part is devoted to mathematical models for the analysis of transportation network equilibria the second deals with methods for traffic equilibrium problems this title will interest readers wishing to extend their knowledge of equilibrium modeling and analysis and of the foundations of efficient optimization methods adapted for the solution of large scale models in addition to its value to researchers the treatment is suitable for advanced graduate courses in transportation operations research and quantitative economics

markov decision processes have become the de facto standard in modeling and solving sequential decision making problems under uncertainty this book studies lifting markov decision processes reinforcement learning and dynamic programming to the first order or relational setting

interest has grown recently in the application of computational and statistical tools to problems in the analysis of algorithms in many algorithmic domains worst case bounds are too pessimistic and tractable probabilistic models too unrealistic to provide meaningful predictions of practical algorithmic performance experimental approaches can provide knowledge where purely analytical methods fail and can provide insights to motivate and guide deeper analytical results the dimacs implementation challenge was organized to encourage experimental work in the area

of network flows and matchings participants at sites in the u s europe and japan undertook projects between november 1990 and august 1991 to test and evaluate algorithms for these problems the challenge culminated in a three day workshop held in october 1991 at dimacs this volume contains the revised and refereed versions of twenty two of the papers presented at the workshop along with supplemental material about the challenge and the workshop

the wiley interscience paperback series consists of selected books that have been made more accessible to consumers in an effort to increase global appeal and general circulation with these new unabridged softcover volumes wiley hopes to extend the lives of these works by making them available to future generations of statisticians mathematicians and scientists this text is unique in bringing together so many results hitherto found only in part in other texts and papers the text is fairly self contained inclusive of some basic mathematical results needed and provides a rich diet of examples applications and exercises the bibliographical material at the end of each chapter is excellent not only from a historical perspective but because it is valuable for researchers in acquiring a good perspective of the mdp research potential zentralblatt fur mathematik it is of great value to advanced level students researchers and professional practitioners of this field to have now a complete volume with more than 600 pages devoted to this topic markov decision processes discrete stochastic dynamic programming represents an up to date unified and rigorous treatment of theoretical and computational aspects of discrete time markov decision processes journal of the american statistical association
