the fourth edition has been carefully revised and updated to reflect current data

this volume focuses on the abuse of statistical inference in scientific and statistical literature as well as in a variety of other sources presenting examples of misused statistics to show that many scientists and statisticians are unaware of or unwilling to

challenge the chaotic state of statistical practices the book provides examples of ubiquitous statistical tests taken from the biomedical and behavioural sciences economics and the statistical literature discusses conflicting views of randomization emphasizing certain aspects of induction and epistemology reveals fallacious practices in statistical causal inference stressing the misuse of regression models and time series analysis as instant formulas to draw causal relationships treats constructive uses of statistics such as a modern version of fisher's puzzle bayesian analysis shewhart control chart descriptive statistics chi square test nonlinear modeling spectral estimation and markov processes in quality control

this book is a stimulating panoramic tour quite different from a textbook journey of the world of statistics in both its theory and practice for teachers students and practitioners at each stop on the tour the authors investigate unusual and quirky aspects of statistics highlighting historical biographical and philosophical dimensions of this field of knowledge each chapter opens with perspectives on its theme often from several points of view five original and thought provoking questions follow these aim at widening readers knowledge and deepening their insight scattered among the questions are entertaining puzzles to solve and tantalising paradoxes to explain readers can compare their own statistical discoveries with the authors detailed answers to all the questions the writing is lively and inviting the ideas are rewarding and the material is extensively cross referenced a panorama of statistics leads readers to discover the fascinations of statistics is an enjoyable companion to an undergraduate statistics textbook is an enriching source of knowledge for statistics teachers and practitioners is unique among statistics books today for its memorable content and engaging style lending itself equally to reading through and to dipping into a panorama of statistics will surprise teachers students and practitioners by the variety of ways in which statistics can capture and hold their interest reviews as befits the authors statement that this is not a textbook the structure is unusual there are twenty five chapters organised in five sections each beginning with a brief perspective of a theme in statistics and finishing with five questions related to that theme the answers provided to the questions in section six are as discursive and illuminating as the main body of the text even if you are pretty sure you know the answer it is always worth checking what the authors have to say chances are that you will learn something every time the glimpses and insights given into this enormous and far reaching discipline succeed in being bewitching entertaining and inviting coverage was never the aim in summary this splendid

book lives up to the four p values of its title it is panoramic in the scope of its survey of statistics it is full of illuminating perspectives it sets entertaining and challenging puzzles and it explores fascinating paradoxes read it enjoy it and learn from it from neil sheldon teaching statistics volume 9 no 2 may 2017
